Having A+ certification tells the world that you are truly a master of the sometimes difficult process of maintaining either a stand-alone computer or working in a network in a company.

The 2003 CompTIA A+ certification exams confront the test candidate with a wide range of questions ranging from legacy operating systems such as DOS all the way through to some of the more obscure Command Line Interface options that are available in Windows XP only.

Being able to demonstrate that you are well versed in concepts such as installation configuration diagnostics and networking tells a prospective employer that you are a "can do" person. Studies have shown that employing A+ certified people:

A+ certification demonstrates that you have the experience to perform a wide range of tasks. This CompTIA certification also brings an employer competence that you have good critical thinking skills. For example in today's world you know that in the endgame it is faster and cheaper to replace an entire power supply and get a worker back to being productive than it would be to have that computer and knowledge worker idle while you wait a week for a four-dollar fan to show up so a defective fan can be replaced.
